

Single page application using JavaScript

In this exercise you have to create a simple code to calculate the sum of numbers that are entered through the input form element. Note that all the numbers should be comma separated. On clicking of a button, you should display the sum of numbers in a div that is hidden by default.

Hint1

Create 3 elements on the page. One a simple input element. Note that don't use the form tag. Just create the html element . Add a button and bind the onclick event to the button .Also add a div with display style as 'none' by default. This will make it invisible.

Hint2

Since the user inputs the values as comma separated values, you have to use split function and split the values as an array. Refer to the split function on the Internet to see its usage. Then iterate through the array and add it.s

Hint3

The background of the slide is an abstract composition of several overlapping, curved, organic shapes. The color palette is monochromatic, consisting of various shades of brown, tan, and beige. The shapes create a sense of depth and movement, with some areas appearing lighter due to the overlap. The overall aesthetic is modern and minimalist.
